

**NU FLOW'S PATENTED TECHNOLOGY
STOPS LEAKS FOREVER!
LEAVING A PERMANENT, STRUCTURAL PIPE WITHIN A PIPE**

Nu Flow's patented lining system creates a new, stronger pipe inside the host pipe. Once cured, the seamless, epoxy-filled liner prevents root intrusion into weakened joints or seams, which can increase flow capacity. The No-Dig solution means no external destruction or excavation, no traffic disruption, and no need for subcontractors to reconstruct access areas. Nu Flow has the experience and technical expertise to meet the specifications of any job, regardless of the size or depth of the pipe, no matter how corrosive the environment.

LESS MESS · LESS DISRUPTION · LESS COST

- Liners fit non-standard 1.5 to 8 inch pipe diameters, with custom sizes available
- Can use 'single' point of entry to install liner with push rod method
- Accommodate multiple 45– and 90-degree bends in all sizes of pipe
- Spot repair using one-size 'change in size' transition
- Liners span "void" or missing sections of host pipe
- Liners can be installed under slab concrete without costly digging and reconstruction
- Lateral lines are accurately reinstated with CCTV camera
- Resin formulas can be custom-mixed to meet any job specifications
